# Using the Help

The 'Help' provides information about the commands used in the program, and leads you through the use of the software.

## Launching the Help

- Click on the  button, or
- Press key F1.

## Navigation in the Help

Texts and objects in blue mean active links. Navigation in the Help is discussed in the chapter of [Navigation](#) in the document

## Workspace

### Starting

After the program starts, the dialog-box shown below appears first (provided that we haven't chosen any other settings). This is where you can set the mode of use for the application.

Choosing the radio button with the label "eBook Reader", the program will appear in the **eBook mode**. By clicking on the button with the label "...", the reader's root directory can be set.

Choosing the radio button with the label "PDF Reader", the program will appear in **"Reader" mode**.

As a result of setting the „Do not show this dialog again" check-box to checked, when the program starts, this dialog-box will not come up. Later on, the application will start in the mode last selected.

Note: In case the „Root" member of the **Initialization file** is set, this dialog-box will not appear.

Using the Help  Contents

### "Reader" mode

In this mode the application functions as a PDF viewer.

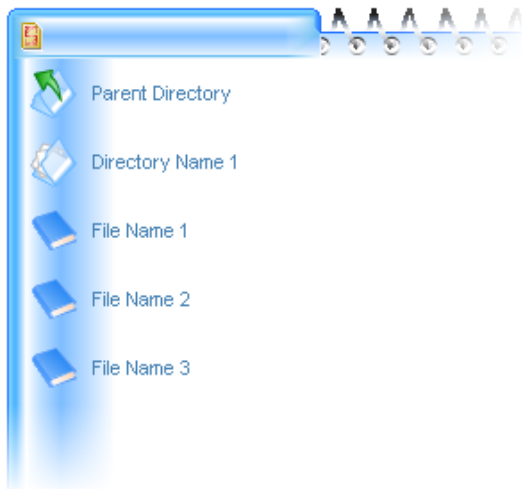

The explanation of the left-side controls of the workspace and the data can be found in the table below.

Button - Heading	Description
	Opening the document.
File Name 1	The name of the opened document.
3	The page displayed (the third in this case).
11	The number of the pages in the document.
118%	Current zooming ratio in percentages.
	Displaying bookmarks (in case the PDF file contains bookmarks).

## Using the Help Contents

### eBook mode

In this mode we can display the PDF files located by the path provided by the root directory as integrated in the user interface. The directory tree can be built up with the file operations provided by the operational system (*copy, delete, create directory* etc.).

Icon	Description
	One level up.
	Directory.
	Document.
	Navigation in the list (the appearance depends on the list window's size and the number of it's elements)
	Displaying the bookmarks (in case the PDF file contains bookmarks).

*Note:* Unless we perform an operation on the document list for a period of time (specified by the "ChView" member of the [Initialization file](#)), the list changes into the phase discussed in the "[Reader](#)" mode. If we move the cursor above the vertical state bar on the left side the document list becomes visible again.

Using the Help  Contents

## Navigation in the document

### Turning a page

We can navigate in the document by means of the page-turning commands. We can step on the first, the previous, the next, the last page of the document. In addition, we can switch between the pages last shown, as well.

Button:

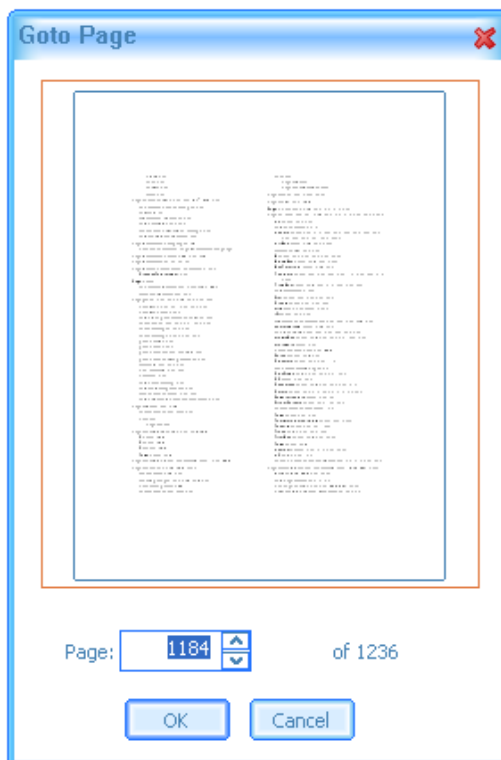

Key:

CTRL+HOME, PAGEUP, PAGEDOWN, CTRL+END, CTRL+<-, CTRL+>

### Jumping on a particular page

You can jump directly to a given page with the *Goto Page* command.

Button:

Key:

CTRL+N

## ***Operations on an opened document***

### **Zooming in and out**

The following commands help you change the size of the picture on the displayed page. The visible content of the page changes in proportion with the changing of the zooming ratio.

Zooming ratio doubles on pacing (in case of diminution is halved), its scale changes between 25% and 1600%.

Page Width and Whole Page commands gear the zooming ratio to the size of the program window. In case of Page Width command, the application adjusts the page width to the width of the workspace, while the Whole Page command will affect the zooming ratio in such a way, that the whole page becomes visible.

Button:

Key:

+, -, CTRL+H, CTRL+J, CTRL+K

### **Rotating pages**

Rotating the page to the left or right from the current orientation. After performing the operation every consecutive page will be displayed in the altered position.

Button:

Key:

CTRL+>, CTRL+<-

[Using the Help](#)  [Contents](#)

## ***File operations***

### **Copying on clipboard**

Copying the selected part on clipboard is done in the following way. The content of the selection is copied on the clipboard only as a textual stream, it does not keep its format.

Button:

Key:

CTRL+C, CTRL+INS

### **Searching texts**

With the help of this command you can find a given text or extract in the opened document. You can use any character in the specification of the sought text..

The searching process starts with the *Find* button. Performing the search can be interrupted any time by pressing key *ESC* or by clicking on the *Cancel* button. In case of a match the program displays the sought text-part inversely???. Searching continues by clicking on the *Find Next* button.

Button:

Key:

CTRL+F

### **Printing**

This command allows you to print the pages of the document.

Button:

Key:

CTRL+P

### Toolbar

Button	Description	Button	Description	Button	Description
	Jump		View		File
	~ to the first page.		Zooming in.		Copying the selected part on clipboard.
	~ to the previous page.		Zooming out.		Searching in the document.
	~ to the next page.		Actual size.		Printing ~.
	~ to the last page.		Adjusting ~ to width of the window.		Help
	~ to the previous view.		Adjusting to the window.		About Sorax Reader
	~ to the next view.		Rotating ~ right.		
	~ to a given page.		Rotating ~ left.

I	About Sorax Reader
F1	Help

## Initialization file

### General section

Specifying the general settings of the Viewer.

Language	In case we want to display the language of the controls of the viewer in a different language (from the default: English), this is the key that has to be set. You might wish to mark the value with the abbreviation pertaining to the given language (XX in the present case).
Root	The root directory of the reader can also be set. Provided that this key is specified the Browser Mode dialog-box will not come up.
ChView	Delay in the phase-change of the list, in eBook mode. Format: day,hour,minute,second.
StackSize	The size of the page stack.
Theme	The name of the current "Skin".

### General.Lang.XX section

General language settings for the controls.

Cancel	Caption of the Cancel button.
OpenDlgFilter	This key allows you to set the filter of the "Open" dialog-box, if the viewer has been started in "PDF Reader" mode.
SearchingFmt	The format of the left-side state bar in case of searching; eg.: Searching on the %d page, where "%d" is the page on which the searching is performed.
VersionFmt	The format of the version number of application; eg.: Version %s, where "%s" will be replaced with the version number.

### StartUp.Lang.XX section

Controls of the "Starting" dialog-box.

Caption	Caption of the dialog-box.
Mode	Label of the "Mode" group.
eBook	Label of the "eBook Reader" radio-button.
Path	Label of the "Path:" static control.
PDF	Label of the "PDF Reader" radio-button.
Again	Label of the "Do not show this dialog again" control.

### PrintingDlg.Lang.XX section

Controls of the "Printing" dialog-box:

Caption	Caption of the dialog-box.
Document	Label of the "Document:" static control.
Page	Label of the "Page:" static control.
Printer	Label of the "Printer:" static control.
Port	Label of the "Port:" static control.

[Using the Help](#)  [Contents](#)

**PasswordDlg.Lang.XX section**

Controls of the "Password" dialog-box.

Caption                      Caption of the dialog-box.

**GotoPageDlg.Lang.XX section**

Controls of the "Goto Page" dialog-box.

Caption                      Caption of the dialog-box.

Page                          Label of the "Page:" static control.

PageCount                  Format of the static control "Number of document pages", where %d is the number of the pages.

**BookmarksDlg.Lang.XX section**

Controls of the "Bookmarks" dialog-box.

Caption                      Caption of the dialog-box.

**AboutDlg.Lang.XX section**

Controls of the "About" dialog-box.

Caption                      Caption of the dialog-box.

**ToolBar.Lang.XX section**

We can set the texts of the tooltips in this group.

Button	Key	Button	Key	Button	Key
	FirstPage		ZoomIn		EditCopy
	PrevPage		ZoomOut		EditFind
	NextPage		ActualSize		FilePrint
	LastPage		FitWidth		Help
	BackPage		FitPage		About
	ForwPage		RotateRight		
	GoToPage		RotateLeft		

Additional setting options can be found at the description of the SPdf.dll.
